1201

还有一种评估风险的方法，通过 speed.cloudflare.com/meta 查 asn，然后在 radar.cloudflare.com 查这个 asn 的 bot 流量占比

一般各大 AI 降智会赦免 aws、google cloud、cloudflare warp 的 ip

哪怕 bot 比例很高

1202

最近在学 Typst，代码即结果的感觉太爽了。作业的全部过程都是自动生成的

<https://typst.app/project/rmmQWpHpalPtqsq7hQt7hq>

The image shows a Typst project interface. On the left, a code editor displays the following code:

```
117 ("1", "3", 3),
118 ("1", "6", 6),
119 ("2", "3", 4),
120 ("2", "5", 5),
121 ("3", "4", 3),
122 ("3", "5", 4),
123 ("4", "6", 5),
124 ("4", "7", 7),
125 ("5", "7", 3),
126 )
127
128 = (1) Prim 算法
129
130 #let prim-steps = prim-mst(nodes, edges)
131
132 Prim 算法从顶点 1 开始，逐步选择与当前生成树相连的最小权值边。
133
134 #grid(
135   columns: 3,
136   gutter: 2em,
137   ..prim-steps.map(step => box(width: 100%){
138     #draw-step(nodes, edges, step.mst, display-new-edge: true)
139   }),
140   draw-step(nodes, edges, prim-steps.last().mst),
141 )
142
143 = (2) Kruskal 算法
144
145 Kruskal 算法按权值从小到大选择边，若构成回路则舍弃。
146
147 #let kruskal-steps = kruskal-mst(nodes, edges)
148
149 #grid(
150   columns: 3,
151   gutter: 2em,
152   ..kruskal-steps.map(step => box(width: 100%){
153     #draw-step(nodes, edges, step.mst, display-new-edge: true)
154   }),
155   draw-step(nodes, edges, kruskal-steps.last().mst),
156 )
```

On the right, a generated diagram titled "数据结构第二次作业" shows the steps of the Prim and Kruskal algorithms. It includes a title "3. 最小生成树" and a subtitle "对于给定无向图，分别用 Prim 算法和 Kruskal 算法求最小生成树，画出过程。". The diagram is divided into two sections: (1) Prim 算法 and (2) Kruskal 算法. Each section shows a sequence of graphs illustrating the step-by-step construction of the minimum spanning tree. The Prim section shows the tree growing from vertex 1, while the Kruskal section shows edges being added in order of weight, skipping those that would create a cycle. The final graphs show the completed minimum spanning trees for both algorithms.

分享平台源码

[🔗 https://github.com/CJJ-amateur-programmer/sharing_platform](https://github.com/CJJ-amateur-programmer/sharing_platform)

一些课程号之间的区别：

网安的数据结构是 103053213 , 计算机学院大部分应该是 100071015

网安的离散是 100120025 , 计院的大部分应该是 100081042

101 查不了成绩/课表：

我查了一下 应该是现在学校上了二次验证 有概率需要手机验证码 你可以尝试先用 webvpn 登录一下系统 要验证就验证 之后再用 BIT101 应该就可以了
